

Objective ID	Objective Description	Task ID	Task Description	Priority
O1	Design and develop a functional PCB system for a weather display device	T1	Create PCB schematic based on design constraints	High
O1	Design and develop a functional PCB system for a weather display device	T2	Create PCB layout and verify design rules	High
O1	Design and develop a functional PCB system for a weather display device	T3	Send PCB for manufacture	Medium
O1	Design and develop a functional PCB system for a weather display device	T4	Assemble PCB using soldering and reflow oven	High
O1	Design and develop a functional PCB system for a weather display device	T5	Test and debug PCB functionality	High
O2	Develop software to control lighting behaviour	T6	Code lighting sequence for weather states	High
O3	Design and manufacture acrylic visual components	T7	Design acrylic frames for weather states (sunny, cloudy, windy, rainy, stormy, snowy)	High
O3	Design and manufacture acrylic visual components	T8	Laser etch acrylic frames	Medium

O3	Design and manufacture acrylic visual components	T9	Combine PCB with acrylic frames	High
O4	Design and model full product assembly and casing	T10	Create 3D models of acrylic frames and casing	Medium
O4	Design and model full product assembly and casing	T11	Assemble components in CAD and create animation	Low
O4	Design and model full product assembly and casing	T12	Produce technical drawings for PCB casing	Medium
